

EDITORIAL

John Papadimitriou,
Chief Communications Officer MSCOMM

Since food crisis scenarios become plausible and multiply, due to Russia's ongoing war in Ukraine, and with climate change threatening agricultural production more and more every year, Europe is trying to accelerate the transformation of its primary sector, in order to respond to modern challenges. **Begona-Pereza Villareal, Director EIT Food CLC South**, analyses how EIT Food supports innovation in the agri-food sector and explains the importance of technology in the production of sustainable and healthy products. Modern skills are a decisive variable for the transformation of the agri-food sector, and they are analyzed by **Thomas Bartzanas, Chairman of the Board of Directors of Smart Agro Hub S.A.** and Associate Professor of the Agricultural University of Athens. The **Minister of Rural Development and Food, Mr. Georgios Georgantas**, presents the ten points at which the digital transition of the agricultural production aims, while in the "Start-ups Corner", **Centaur Analytics** brings to the table modern applications in the food supply chain.
